

Elevator Drive Systems

Waupaca Elevator offers a variety of drive systems that are certified to be safe, reliable and provide years of trouble-free service. Most drive systems require a small space for mechanical operation, or a machine roomless system houses mechanicals within the elevator shaft to accommodate space limitations. Your Waupaca Elevator representative will review your project requirements, budget and local codes to help determine your best choice.

The Paca Series, is an affordable winding drum or hydraulic elevator system with a smooth stable ride. Innovative J-Rail system reduces installation time.

The Excelelevator™ roped hydraulic or winding drum elevator is our most popular residential series offering a smooth and quiet ride on T-rail.

The Custom-Lift® is a model with a long history of dependability and versatility. It is ideal for new construction or remodeling projects with limited space.

Products and illustrations shown may not be standard.
